
(recorded Nov. 5, '92)
took place ca. end Jan., '76 (14-day period; early Feb.)

In the early evenings, I stood on the grass near the rabbitbushes, and saw a white, very bright light, sometimes w. red, sometimes w. orange (*) and having borrowed binoculars for the purpose, looked closely at it — and saw that in the midst of the brightness was a funnel ("antenna") which blinked in differing patterns in an ingenious non-repetitive way. As if there were at least 4 boxes or circles which could be turned on (red) or off (black) on both N. + W. sides in this funnel, creating patterns. As I looked, I felt ridiculous thinking that these signals, pointed my way, were programming me re. future beliefs, actions re. UFOs and possibly, spiritual knowledge or jobs. On and on this went until I felt fatigued, and if I went in or for a walk and came back later, the white light was usually still there. It was there several evenings/nts. in a row, and over 2-weekend, not always blinking — and the predicament "Is this a helicopter and I'm fooling myself, or is this UFO-telepathy into me then I must have had enough — who knows what I'm being fed with?" ended in my avoiding, by walking another route, and again running up, to a neighbor who I'm actually running up, him saying "I think I've seen an UFO over there" — that "It's just a helicopter. The army has a lot of them out these days." I reversal fooled. They're much higher, the real UFOs!" and I returned the binoculars to him, treating the light almost w. a bored shrug when I saw it in following days. I wasn't going to waste my time on that. I didn't even record the fantastic above, or I thought what I already knew about it.

After that I must have thrown out the 2-page description I believe I wrote about the 27/1/76 sighting, and I wasn't bothered writing a description of the 18/2/76 sighting, assuming they were meaningless helicopters. Just today in late 1992, after having passed my Initiation to a Group with higher consciousness, to do certain earth-tasks I am not yet aware of — and after having, yesterday, talked w. 2 other UFO-seers, one who had a close encounter, & the other a telepathic meeting — did I investigate the helicopters used here and find it reasonable to rule that out. Leaving only a combination of my UFO direct-education as probable.

(*) Sometimes the light was larger and orange (O) in an oval, sometimes it twinkled from its white brightness ✕. It looked like a very bright star, close up, at first I thought it could be a planet — but the binoculars showed its real shape. Also I didn't like looking through the extra glasses on the lens at an UFO, not being possibly taught thru one (my glasses were artificial enough).

The whole UFO-sighting period stopped abruptly in aug. '76 when I stopped wearing my glasses, to try to strengthen my eye-muscles and get better sight. I couldn't even see the stars anymore.

It was hard to focus on the blinking funnel, because the white light shone so brightly through the binoculars.

1st time watched some minutes another nt. ca. 30-40 minutes until tired in N. side of head.
