

Witnessed Characteristics:  
how they looked and what they did

(the numbers refer to the specific sightings'  
"illustration details" and "full written reports")

how the witnessed UFOs looked

their simplest shapes

like a bright, standing star, which then flies off (# 6)  
flying soft white somewhat-elliptical circle larger than a star (# 3)  
small grey or black somewhat-elliptical circular center with a surrounding soft  
white somewhat-elliptical circular field or disk, flying (# 2 part 1, 5, 10, 17)  
a white arc of its opposite side bordering the somewhat-elliptical circular  
object (# 2, 5)

bright white triangle with rounded corners (# 7)  
twinkling bright white standing oval (# 14)  
hamburger-bun shape, red on both top and bottom halves (# 12)  
1-second boomerang-shaped soft-white energy drone (# 13 part 3)  
associated series of large consecutively flashing energy stars (# 1, 9, 15)

abrupt changes in visibility

lit up/materialized while standing still (# 7, 12)  
lit up/materialized while in flight (# 2 part 2, 8)  
suddenly disappeared/dematerialized while standing still (# 12)  
suddenly disappeared/dematerialized in mid-flight (# 7, 8)  
with a hidden section becoming visible (# 9)  
with a hidden section unfolding (# 18)  
with a visible section becoming invisible (# 13 part 1)

their colours, when uniform

a unique and easily recognizable fuzzy-textured, soft warm white (# 2 part 1,  
4, 5, 8, 10, 13 part 3, 16, 17, 18)  
bright white (# 7, 13 part 4, 14)  
small red circle (# 11, 13 part 1 + 2)  
shiny red (# 13 part 4)  
reddish orange (# 12, 14)

warm light orange (# 9, 14)  
yellowish orangish (# 14)

their changing sectional shapes, changing colors, and varying streams of light

with a red or white round-ended cylindrical section on top of a white or red base, which is triangular with acute-angled or rounded corners, and both parts can shine or beam strong white or red light (# 11 a + b, 12, 13 part 4, 14)  
with a red cylindrical top, and a white base formed as an upper-semi-circle, where a thin stream of light shines from a thin opening in the base's right and left sides (# 12)  
with a cylindrical top and two outwards-slanted legs as the base, all pulsating red or white together, with also light from a thin opening in the base's right and left sides (# 13 part 1)  
with a red or white cylindrical top and white oval base, each can shine brightly (# 13 part 1, 14)  
with a white or red cylindrical top, and white or red horizontally rectangular base, each section can shine brightly (#13 part 1 + 4)

antenna part containing 2 adjoining vertical rows of 4 lights which flash red or turn off to black in continuously changing patterns (# 13 part 1, 14)  
a distant somewhat-elliptical circular disk, white with a small dark center, then tilted or flipped to its now closeby, much larger-appearing underside with swirling red energy sectors and a relatively smaller center (# 2 part 1)  
two red circles slowly flying at tree-level with a vague, large oblong form behind them (# 13 part 2)  
a red complexly formed UFO slowly flying at tree-level with a vague, very long, cigar-shaped form behind it (# 13 part 4)

#### what they did

their tell-tale maneuvers in the sky during single flight

abrupt, acute-angled turns at undiminished speed (# 2 part 2)  
flying, stopping, flying (# 17)  
sudden shifts in course to both sides, then returning to the straight course (# 10)

their maneuvers in the sky as a coordinated pair

a pair flying strictly parallel to each other (# 2 part 2, 16)  
a pair flying loosely parallel (# 5)

a pair flying loosely parallel, with fast, coordinated, interweaving variations  
(# 3)

a pair of gray ellipse-shaped craft, each with a surrounding soft white elliptical field, plus a bridge connecting these fields – both flying parallel within an elongated, apparently manipulated atmospheric field both before and behind them  
(# 16)

two close pairs flying independently parallel, with two layers of energy-fields surrounding each individual's center, and with the outer energy layer of each pair locked together (# 4)

their behaviour while hovering very low

flying low above a field, hovering, and flying off again (# 11 detail a + b)

hovering near the ground, disappearing, shifting shape and hovering in the air nearby, disappearing again, a possible occupant running away (# 9)

hovering in one tree-level place for half an hour or more (# 14)

hovering low above a field, shifting forms and colors many times, shifting to nearby locations, for half an hour or more (# 13 part 1 + 4)
