

UFO-Constructions

29 Dec. 1992

A little white UFO built for 1, but 2-3 could be cramped into it, which I was trying to teach my nearly 25-year old son to fly, from inside it.

30 Dec. 1992

We were 6-7 students, young Earth people from different nations and of both sexes, learning from an extraterrestrial firstly how to be passengers, and secondly how to fly a UFO.

There were 6 cot-benches in the walls for 6 people, as trips could take several days (which impressed me). We could either sleep on or sit and watch from the 3-seat-long benches on each side of the craft. We had two instructors in space-uniform suits, and one did most of the talking.

31 Dec. 1992

The UFO equipment for steering and the routes leading away, involved the channels branching off of my own spine. There was an internal bodily feeling that the UFO starts flying from within my own body. My spinal cord feels/looks like a corridor with its possible side exits, and most of these are branching out into brown/orange outer-space maps, leading to various space-realms and worlds.
