

### Flying saucers in another Solar System

On another planet, three pairs of oval UFO-surrounding energy fields (containing them unseen) or of oval UFOs themselves, are giving a short exhibition flight, seen in the sky by the crowd below.

Each pairs' units touch each other along an arc of their edges (like a clam shell). As seen from below, the units quickly rotate at times either outwardly or inwardly (like feathered wings which unfold and fold together again).

The three pairs are in coordination flying fast in a clockwise circle, equally distant from each other along its airy perimeter.
