

(several details contradict)
 (some tracks like jets, as movement reminds of them in pair, with lights on wings, and)
 no earthly impossible movement.

12/10/75
 9:45 pm

0 - 2 sets of lights appear in movement, A+B as black circles with large fuzzy white surrounding lights, a little larger than red earlier, + C+D the same, travelling (A||B)+(C||D), white surrounding lights touch each other.

- 1 - A+B approach C+D, then move away
- 2 - Irregular approaches show independent flights of C-D and A-B
- 3 - move slightly away + continue until fade into clouds, approximately parallel 4

- Notes:
- a) impression of a stream of white current both immediately behind + in front of each set of lights, as if floating on a stream, streams A+B interlocked and streams C+D too
 - b) as if C+D did not approach "too" close to A+B, not same freedom of movement as 10/10/75
 - c) lights reversed, i.e. black center with white outside

Conditions under vicinity = d) looking at start slow + peacefully
 e) not expecting to see this (as so little portion of sky moving)
 (earlier because had already seen)
