

(recorded 4/87)

sometime before 15/8/79

early evening (after twilight - before dark)

SANTA CRUZ

vague stars

(Thickest grey cloudy, just out for an evening walk, near the Zen Center I'd visited)

- 1 - Noticed a moving object high in the distance, moving casually between an airplane and jet speed in a wide arc across the sky; after about 5 seconds recognized it from the typical type of light surrounding it and its greyish center, and its size (refer to 16/10/75 sightings) as a UFO, to my
- 2 - surprise and pleasure - because had never seen 1 flying this skyarc before (always 2), because in America, and because over part of a city (although fairly inconspicuous).
- 3 - About 3 seconds later it stopped in the sky, and shone a little brighter through the clouds, so I saw only the white light, and I felt we "faced" each other for the 2 1/2 seconds there
- 4 - Then it continued its flight casually for about 4 seconds, the rest of the arc, disappearing in the distant clouds near the horizon.

(Pleased that felt it had noticed me among the whole city view there, and that it existed there, felt it was like a routine flight.)

total time ca. 15 seconds (2 1/2 sec. UFO)
