

16/8/76
9:55 p.m.

⚡ (Very clear night, see zodiac arms clearly + deep, out 5-10 minutes on alan boling star, expecting to see UFO but not looking just empty mind, surprised at first but sure by step 2 + afterwards due to speed, type of light, + proximity, but lacking feeling of shock in spine)

- 1- Very bright white light appears in movement with dark center, silent, 5x a jets speed, 10-15x an airplane's
- 2- When overhead can see details, that it's actually 2 grey oblong objects, each surrounded by bright white energy field, a bridge of white light connects them + as if in constant movement (touching all the time), flying completely parallel.
As if the grey is not moving, ^(floating) but making a white field which is + which breaks thru' the air (like ice-breaker) before + fades out behind (at the 'speed of fire').
Strong white color 2nd the breadth of grey object on each side + lighter white field behind after.
- 3- Seem a little as a pair, but generally in straight line (speed + direction give impression of goal-oriented)
- 4- Fade into distance, with white light blinding again to details.

ASTRON./TECHNICAL HYPOTHESES: a) That when touching fields they share or by energy, require less + can move faster
b) That seasonal appearances because star cluster in galaxy = pull from universe clearest + strongest for mechanical 'riding'
c) That time of evening may be when sun's pull is least + moon's on star's can be exploited (white color resembles sun's energy + electricity combined).

(3 1/2 seconds)

VERY PRECISE
