

- Hypothesis: (to explain conditions + phenomena)
1. to get my attention + prove UFOs exist by # of views
 2. answering ~~my~~ thoughts about their details and mechanisms
 3. but in a way to puzzle me more than to answer
 4. when my mental energy flies through space (starting to look at stars), a contact is made by intelligent energy-forms in between
 5. chance about who sees in some cases, but short ind. sightings more purposeful
 6. 2 kinds of visual - one transportation long distances, two communication non-verbal instantaneous in narrow area of sky looking at

- 1- looking at star, large light appears
- 2- formed like $\frac{1}{2}$ a space-ship, shining white light (recognized as it's special kind of power), large (close) and flying on side (bent part way over), suddenly "faded out" totally. (length of time of meter, but too large + irregular, sure it was UFO)

- Conditions = a) always happens shortly after begin looking at sky intensively, even yet when concentrating on seeing a UFO out of curiosity / ~~hypothesis - mental energy~~
- a) standing ~~some contact~~ in front of house alone, always in personal 'confident' places
 - b) in first sightings long + detailed, after next 3-4 ca. 1-2 seconds, leave me questioning, not satisfied; "no one else sees" although walking nearby often, not looking up (a private contact)
 - c) feel beforehand will see this evening (but do pretty often when see nothing)
 - d) each sighting show diff. details, often appearing after i'd been thinking about the detail area for several days
- LESS PRECISE
