

(recorded 4/87)
bet. 20/10/75 - 17/12/75
bet. 9-10⁴⁵ P.M.
(ca. 9 seconds in all)

- 1- in Big Dipper, noticed a still "star" equally bright + white + same size as the others, in an in-between position between the usual stars, and realized after a few seconds that no star or planet should be there.
- 2- a couple seconds after, it flew away fairly fast but in a relaxed curve, and disappeared in the distance (ca. 4 seconds flight).

Conditions - meditated outdoors on a lawn, when finished opened eyes and saw the 5th "star" (when looked up); afterwards wondered if it was "watching" my inward states while meditating a) or just routinely greeting me (one who meditated).

total time ca. 9 seconds
VERY PRECISE
