

27/4/76

11:45 P.M.

Ca. 5-6 seconds

E

(Possibility = low airplane w. diff lights on body, switching on asymmetrically for visibility in fog + drifted by the wind)

- 1 - On altar looking at star, very bright white light begins flashing, silent, distance implies movement between planes rather than a ^{cont.} straight-line movement, meaning must be constant cut-offs, 3-4 times larger than stars.
- 2 - Periods of flashing, to set the same, pauses between sets, called loudly for Denise who witnessed after step 3
- 3 - Flashes bright enough that completely visible thru clouds thick enough to hide the star - implies object flying low
- 4 - Set # 6, the 4th flash followed by a thin stream of light shot down to position 7 and back again, then 5th flash from a point in-between
- 5 - Some sets with fewer # of flashes, to more after #9 despite clear air and enough distance to still see.

Light flashes same sort as 28/12/75 + Oct. 75.

Conditions = open from an emotional disturbance w. burnduff-grey meeting + fatigued in body and mind. Denise "not sure what it was, it seemed like an airplane falling down, or a large grey figure lit up by the lights, or something spinning in circles, light like firecracker-type."
