

Introductory event

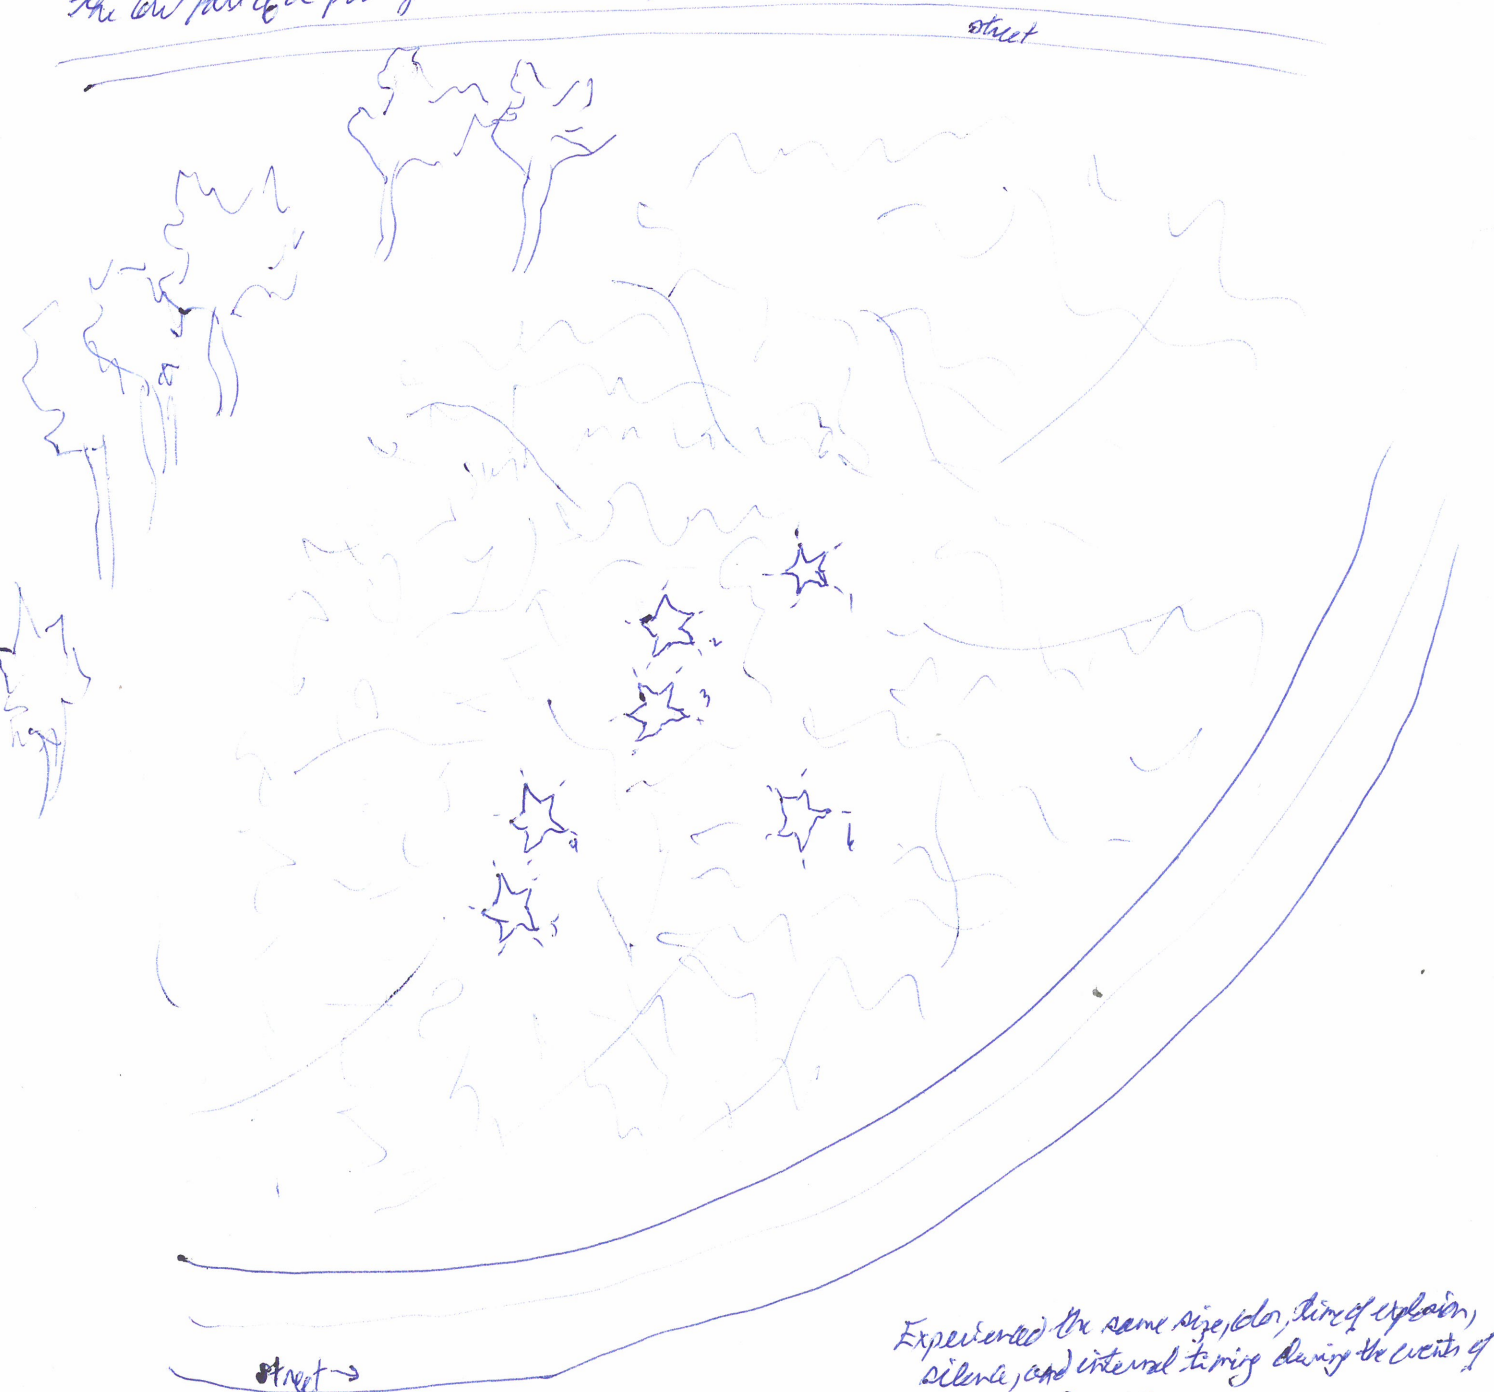

(bet. 2-16-75) Oct., 1975 / records 8.7.16
3-4 seconds

1. #1 energy flash, large, silent, quick, explosive (their distance maybe 15 ~~feet~~ ^{feet} away (average)), very white.
2. #243, ^{then} about pause, then flash (within 3).
3. #445, " ") 4 flashes - then 5.
4. #6, after double the pause-length, 6 flashes.

The contrast between the bright, large flash and the silence and returning darkish scene, made me think of the unexplainable, eternally. Investigated the field for letters of firecrackers or whatever, to rest late afternoon and found nothing. Told no one, found it valuable, puzzling, troubling.

~~Possible, were only 5 star flashes, in that case it was #142 near each other, pause #214 near each other.~~

Grid 5 - cycling in darkish early morning into train station. ~~investigated field the rest day and found nothing.~~
the low part of a grassy area w. no bushes, but bordered on one side by trees.

Experienced the same size, color, time of explain, silence, and internal timing during the events of 28.12.75 and 27.4.76.
