flicker
(an airplane here)

- E (looking at early beautiful sky, neighbor just passed by, alone)
1. very bright light, larger than star, about size of whole airplane, lights up standing still, not circular but as if light between airplane wings too (solid light)
 2. begins to move slowly, like floating, moves only a few degrees then disappears into cloud completely and not reappear on the other side 3.

morning orange light

(A feeling, possibly imagined, that my questions about UFOs are answered or stimulated further by the differing details of sightings + strikes me that nearly always, to one else is around looking, (How much imagination, projection of explanation into sightings, and how much pure detailed observations messages?))

LESS PRECISE

Due to airplanes, clouds, white lights, disappearance effects noted in evenings after sundown, realized could possibly be an airplane (with lights on, blurred body as if all lit) (and disappeared abruptly).
