

"No thanks for more" again

Oct., 2022

This unconsciously closing the door on my UFO experiences and examinations happened again while writing all this up in 2021.

In April, 2020, the US Air Force unexpectedly publicized film-clips from reportedly 3 of its own UFO sightings. Encouraged by this sudden "open window" and official wake-up call, while setting up my own much earlier recorded material for sharing through my website, I entered a longer period of daily inspiration starting June 3, 2021. But during the following two months of this almost daily top-gear work, I was getting physically weaker and weaker, more and more drained.

On Aug. 3, I inwardly saw an area of intense white energy in the upper right side of my brain, and thought it might be leftovers from an old invasive infection, which was draining my body. Several years ago, a long magnetic-resonance-imaging scanning session had as a side-effect knocked out the original infection.

I've meditated daily for more than 50 years, and so have a fairly versatile control of my nervous system. So on Aug. 4, I imagined sending a strong inner electro-magnetic force similar to the MRI magnetism to the area to dissolve the seemingly foreign energy - which worked. Immediately afterwards, I saw a lesser field of this white energy in also the upper left side of my brain, and likewise dissolved that. Then a smaller amount in my right lung, which I removed. Then another little remnant inside part of my intestine, which I also removed.

On Aug. 5, I discovered that I'd lost all my inexplicable inspiration and UFO-related drive, that had fuelled my enormous overview, sustained energy, and quick, precise formulation during the previous two-months' set-up of my old material. But my intensity from that day on became much more focused on being everywhere within my body, trying to feel and repair its parts and enjoy it as a whole - which has made me much more integrated as a human being.

I hypothesize that the long series of fast-shifting light-signals sent to me by the hovering UFO in my last series of almost daily experiences in Jan./Feb., 1976 (report # 14), was stored long-term in my brain or nervous system, designed to come forward when I was ready. Possibly with relevant information which would be useful in the future - either for me, for the UFOs themselves, or for both of us together. That the leftovers of that latent stimulus fuelled the re-kindling of my UFO project about my 46-years' earlier strongest and most-documented experiences.

When I got too top-heavy and drained in Aug., 2021, I reacted by unknowingly burning up the available left-overs of the UFO's stored-up information source or

energy, and returned to my normal level of mental functioning - but with some of the earlier intense impetus moved down into my general bodily awareness.
